Řešení s postupem

 solve $x+y=1, x-y=2$

Input interpretation:

solve

$x + y = 1$
 $x - y = 2$

Result:

More digits
Step-by-step solution

$x = \frac{3}{2} \approx 1.5000$ and $y = -\frac{1}{2} \approx -0.50000$

Implicit plot:

The plot shows a Cartesian coordinate system with x and y axes ranging from 0.5 to 2.5 and -1.5 to 0.5 respectively. A blue line segment connects (0.5, 0.5) to (2.5, -1.5), representing the equation $x + y = 1$. A red line segment connects (0.5, -1.5) to (2.5, 0.5), representing the equation $x - y = 2$. The two lines intersect at the point (1.5, -0.5), which is marked with a small red dot.

X_{\min}
 X_{\max}

Y_{\min}
 Y_{\max}

— $x + y = 1$

— $x - y = 2$

Assuming "sirius" is an astronomical object | Use as

a class of satellites or an internet domain or more | ▾ instead

Assuming Sirius | Use Sirius B instead

Input interpretation:

Sirius (star)

Properties:

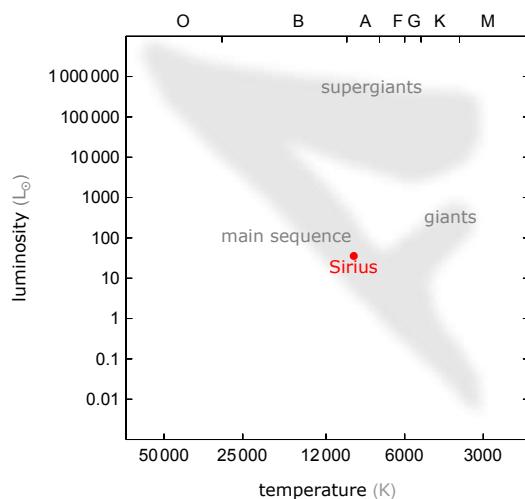

[More](#)

[Show history](#)

distance from Earth	8.591 ly
apparent magnitude	-1.44 (easily visible to the naked eye)
absolute magnitude	+1.45 (visual)
spectral class	A1Vm (main sequence enhanced metal features)
effective temperature	9400 K
mass	5.2×10^{30} kg $2.6 M_{\odot}$
main sequence lifetime	820 million yr
end state	carbon–oxygen white dwarf
Bayer name	α Canis Majoris (Alpha Canis Majoris)

[Units](#)

-----------------	--

Wikipedia summary:

Richard Feynman:

Richard Phillips Feynman was an American theoretical physicist known for his work in the path integral formulation of quantum mechanics, the theory of quantum electrodynamics, and the physics of the superfluidity of supercooled liquid helium, as well as in particle physics (he proposed the parton model). For his contributions to the development of quantum electrodynamics, Feynman, jointly with Julian Schwinger and Sin-Itiro Tomonaga, received the Nobel Prize in Physics in 1965. He developed a widely used pictorial representation scheme for the mathematical expressions governing the behavior of subatomic particles, which later became known as Feynman diagrams. During his lifetime, Feynman became one of the best-known scientists in the world. In a 1999 poll of 130 leading physicists worldwide by the British journal Physics World he was ranked as one of the ten greatest physicists of all time.

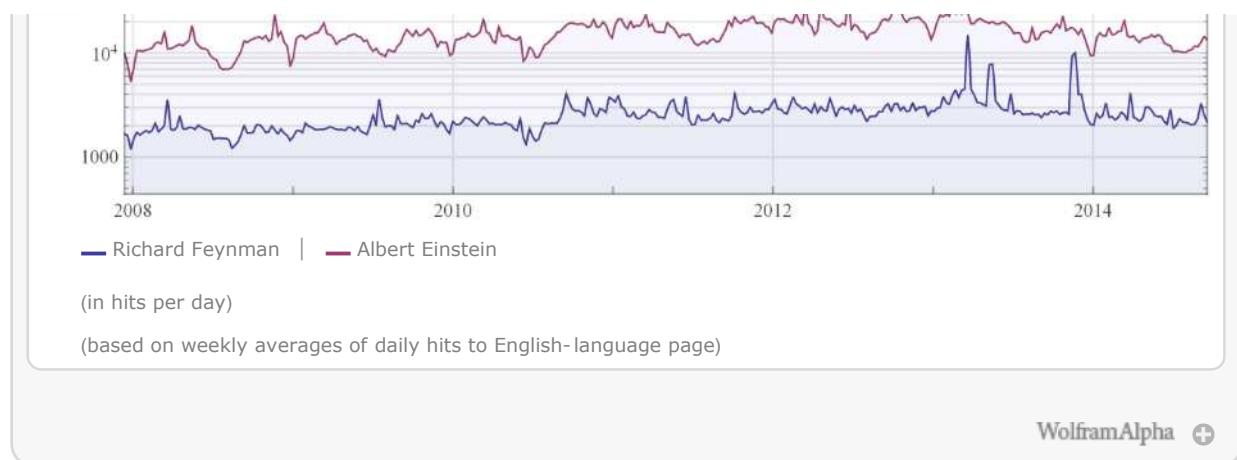

Albert Einstein:

Albert Einstein was a German-born theoretical physicist who developed the general theory of relativity, one of the two pillars of modern physics (alongside quantum mechanics). While best known for his mass-energy equivalence formula $E = mc^2$ (which has been dubbed "the world's most famous equation"), he received the 1921 Nobel Prize in Physics "for his services to theoretical physics, and especially for his discovery of the law of the photoelectric effect". The latter was pivotal in establishing quantum theory.

Internetová bezpečnost a sociální síť - aneb zjistěte koho opravdu znáte...

Je zajímavé podívat se na vlastní sociální síť a množství přátel. Ještě lepší je se takto podívat se na síti žáků ve škole v rámci hodin IT, jako prevence stalkingu a dalších možných projevů kyberšikany. Ideální jsou na tuto ukázku žákyně kolem 14-15 let, které mají obvykle více než 500 přátel, aniž by je většinou znaly. Taková mapa pak může být jeden z ukazatelů, na koho si dát potenciálně pozor.

Poděkování

Rád bych na tomto místě poděkoval za možnost realizovat projekt eVIK - výuka, individualizace, koučing, CZ 1.07/1.1.32/02.0132, který na naší škole - Dvořákovo gymnázium a SOŠE, Kralupy nad Vltavou, probíhá v letech 2013 a 2014. Tento projekt je financován Evropským sociálním fondem a rozpočtem České republiky.

Dále bych rád poděkoval i projektu SVV 260098 - Studentský výzkum v oblasti didaktiky fyziky a matematického a počítačového modelování, za možnost hlouběji prohlédnout do zadané problematiky.
